SUMMARY

Enthusiastic, results-oriented web developer that has transitioned from enterprise customer and team-facing roles into software engineering. Proven track record of successfully organising cross-functional, internationally distributed teams to deliver on complex projects that have multiple dependencies and constraints. Known for being adaptable, forward-thinking, and able to add value across the organisation. Brings the energy.

WORK EXPERIENCE

- Feb 2020 - **OPERATIONS MANAGER**
 Sep 2020 Nova Credit, San Francisco, USA
- Monitored daily productivity across engineering & non-engineering functions & implemented modifications to increase efficiency in a YC-backed startup
 - Developed proposals to leadership for multiple enterprise tools (Expensify, Salesforce, Gsuite, Slack, Lever, Brex, etc.)
 - Assessed deficiencies in the D2C product, co-created a complete redesign of the UX using Figma which the company adopted, built & launched in the next quarter
 - Streamlined financial reporting & minimised employee overspend by designing a workflow that converted .csv data into a multi-dimensional, department-specific analytical report of spending habits
- Jan 2018 - **SENIOR AGRIBUSINESS ANALYST**
 June 2019 National Australia Bank, Brisbane City QLD
- Provided superior customer service & financial assistance to a portfolio of 5 of Australia's largest farms (~\$200M)
 - Led a team of analysts, delegated tasks, monitored performance and provided ongoing training
 - Orchestrated multi-million dollar deals through meticulous, cross-functional project management
- Jan 2016 - **AGRIBUSINESS ANALYST**
 Jan 2018 National Australia Bank, Warwick QLD
- Partnered with rural manager to test one of the first broker-banker roles at NAB Agribusiness
 - Secured \$1M new Farm Management Deposit funds from existing clients & retained all existing funds
 - Succeeded in retaining 100% of client base through relationship management & portfolio review
- Feb 2012 - **OPERATIONS MANAGER**
 Nov 2015 Rockaway Records, Carindale QLD
- Led a 6-person team in charge of all budget, sales, organizational, purchasing, & maintenance functions
 - Transformed the company's online presence by recruiting skilled web development contractors, resulting in additional revenue for the business
 - Designed & implemented team performance incentive system that boosted on-floor sales by 16%

EDUCATION

2021 - 2022
Coder Academy | Melbourne
DIPLOMA OF IT
 Full stack web development

2012-2015
University of QLD | Gatton
BACHELOR OF AGRIBUSINESS

TECHNICAL SKILLS

- Languages: JavaScript, Ruby, HTML5/CSS/SASS
- Frameworks: NodeJS, ReactJS, Ruby on Rails, Gatsby
- Tools: Bootstrap, Heroku, Netlify, Git, Figma, Balsamiq, Trello, Asana, Mural
- Databases: SQL (PostgreSQL, MySQL)

OTHER SKILLS

- Operations/project management
- Touch typing > 100 WPM
- Documentation/writing
- Cross-functional team management
- Communication & customer service
- Critical thinking
- Time-management & teamwork
- Integrity & professionalism

OTHER

2021 **Hackathon:**
Hacking for Humanity
 Project manager of team OzHarvest

2020 (ongoing)
Applied Data Science w/ Python specialization
 University of Michigan (online)

PROJECTS

These are just some examples of things I have worked on. Please keep an eye on my **website & Github** as I'm often working on new things!

2022 PORTFOLIO V2

JavaScript, Bootstrap 4, Gatsby, React, HTML/CSS/Sass

This is V2 of my original portfolio website that was built with basic HTML/CSS last year. V2 has been built with Gatsby and React and makes use of various React/Gatsby features such as dynamic images and hooks. I learned so much about styling during this project, specifically how to leverage Gatsby, Bootstrap and React effectively together to create a minimalistic yet powerful app. The next step is to develop a digital garden page based on all my writings in RemNote & Roam Research over the years.

WWW.ANGELAJOHNSON.DEV

2022 TO-DO APP

JavaScript, React, HTML/CSS/Sass

A simple to-do app that helps its users keep track of things they need to get done. Built with React, it uses various hooks to manipulate state & allows users to add/remove/tick off/filter to-do items in a meaningful way. Styled simply with CSS.

[HTTPS://AIS-TODO-APP.NETLIFY.APP/](https://ajs-todo-app.netlify.app/)

2022 WEATHER APP

JavaScript, JSON, HTML/CSS, Weather API

Created with vanilla JavaScript, this weather app fetches weather data from the Weather API based on the user's latitude & longitude and meaningfully displays it. I made use of animated Skycons and conditionally rendered these based on weather conditions at the user's location. There is a clickable button that toggles the weather between celsius and fahrenheit.

2022 FARMERS MARKETPLACE

Ruby on Rails, Devise authentication, Stripe, AWS (S3), PostgreSQL

This two-sided marketplace created in Ruby on Rails provides users a community to redistribute local produce that would otherwise be wasted. It has basic CRUD functionality, with additional complexity given via devise authentication (users can sign up and list food, edit their listings, etc) and Stripe (users can add to cart and checkout). It uses AWS (S3) for image storage & PostgreSQL as the database for storing listings. Styling was not included as it was beyond the scope of the assignment, but I'd love to build it out as a future project.

2021 HACKATHON: HACKING FOR HUMANITY

Figma, Contentful, Mural, Asana

I was project manager of a group of 4, and I also designed a presentation and pitched our solution to ~100 people in the final. We were paired with a charity, OzHarvest, and had 48 hours to solve their business problem (poor design on a particular section of their site). I led the team through brainstorming (in Mural), project management (in Asana) and then finally presentation. We all created our solution together in Figma and presented a high-fidelity mockup at judging. It was an amazing opportunity, I met so many great folks, learnt lots about collaborating and time-management specifically with regard to engineering projects.

2021 AJ RECORDS

Ruby, JSON

This is a quirky little Ruby terminal app I created when I was first starting my coding journey. You can visit the store, interact with the store assistant, search through the vinyl (by album, artist or genre) and add as many as you want to your cart. It taught me the need for separating concerns, and the proper use and functionality of modules and classes. I leveraged many gems (tty-prompt, terminal-table, artii, colorize, etc) to enhance the look & feel of the app. It would be a fun challenge to convert over into a Rails or React app.

2021 PORTFOLIO V1

HTML, CSS

This was the first 'coding' project I ever worked on. It was a simple static site with a few HTML pages (about, projects, blogs, contact) backed by some CSS. I have since refactored it to React.
